

Nova CRM – Agency Management Dashboard

Project Overview

Nova CRM is a web-based Client Relationship Management (CRM) dashboard designed for a digital marketing agency managing multiple leads, clients, projects, and follow-up activities. The goal of this project was to create a centralized platform that helps agencies organize their workflow, monitor business performance, and improve client management efficiency.

The dashboard was designed for a growing agency environment where team members need quick access to lead information, client records, project progress, and daily tasks. The solution focuses on improving productivity through a clean, scalable, and user-friendly interface.

Problem Statement

Many small agencies still rely on spreadsheets, messaging platforms, and disconnected tools to manage leads and clients. This often leads to:

- Missed follow-ups
- Difficulty tracking lead progress
- Scattered client information
- Poor visibility into project status
- Reduced team productivity

The objective of Nova CRM was to centralize these processes into a single dashboard that supports daily agency operations and improves workflow efficiency.

Target Users

Primary Users

- Agency Owners
- Sales Executives
- Account Managers
- Business Development Teams

User Goals

- Track leads across multiple sales stages
- Manage active client relationships
- Monitor project progress
- Schedule and complete follow-up tasks
- Access important business metrics quickly

Design Solution

Nova CRM was designed as a centralized workspace where users can manage the complete client lifecycle, from lead acquisition to ongoing client engagement.

The platform enables users to:

- Monitor sales performance
- Manage lead pipelines
- View client information
- Track project progress
- Organize daily tasks
- Configure account settings

The interface prioritizes quick access to critical information while maintaining clarity and scalability.

Screens Designed

1. Dashboard Overview

The dashboard provides a high-level overview of agency performance through KPI cards, revenue metrics, recent activities, upcoming tasks, and business insights. This screen acts as the central hub for daily operations.

2. Lead Pipeline

The lead management screen organizes prospects into multiple sales stages including:

- New Lead
- Contacted
- Proposal Sent
- Negotiation

- Won

This visual pipeline helps users understand lead progress and identify opportunities that require follow-up.

3. Client List

The client management screen displays active clients, project details, service information, status indicators, and engagement records in a structured table format. Search and filtering options improve navigation and data accessibility.

4. Client Details

The client profile screen provides detailed information about a selected client, including contact information, project progress, recent activities, and engagement history. This allows account managers to quickly access relevant client information without switching between systems.

5. Task Management

The task management screen helps users prioritize daily work through task categorization, status indicators, and completion tracking. Tasks are organized by priority and progress status to support effective workflow management.

6. Settings

The settings screen enables users to manage profile information, account preferences, notification settings, security controls, and CRM configuration options.

User Flow

This workflow mirrors how agencies manage business operations in real-world environments.

UX Design Decisions

Workflow-Based Navigation

The navigation structure follows the natural agency process, allowing users to move seamlessly between leads, clients, projects, and tasks.

Information Hierarchy

Critical business metrics such as revenue, active clients, leads, and task status are displayed prominently to support quick decision-making.

Scalable Layout

The dashboard uses card-based components and structured data tables that can accommodate increasing amounts of information as the agency grows.

Consistent Design System

A unified design language was applied across all screens, including typography, spacing, colors, buttons, and cards, ensuring a consistent user experience.

Action-Oriented Interface

Search functionality, filters, status indicators, and quick action buttons were included to reduce friction and improve task completion efficiency.

Visual Design Approach

Color Palette

A modern purple-accented color system was selected to create a professional SaaS-inspired interface while maintaining strong visual consistency across all screens.

Typography

Clean and readable typography was used to improve information accessibility and support dashboard usability.

Layout

A card-based layout structure was implemented to organize complex information into manageable sections and improve content scanning.

Tools Used

- Figma
- Google Fonts

Outcome

Nova CRM successfully centralizes agency operations into a single platform, enabling users to manage leads, clients, tasks, and business performance efficiently.

The final design improves workflow visibility, reduces information fragmentation, and creates a scalable foundation for future CRM functionality. By focusing on usability, clarity, and business workflows, Nova CRM delivers a professional dashboard experience suitable for modern digital agencies.
